TUAN T. LAM
PRIMARY EXAMINER

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with attorney Robert Madden (Reg. No. 57,521) on 8/22/2006.

The following changes have been made to the subject application:

Claim 2:

Lines 23-24, "the pre-noise detection signal" has been changed to --a pre-noise detection signal--.

Claim 15:

Line 7, before "current signal", --differential-- has been inserted.

Claim 17:

Line 1, "15" has been changed to --16--.

Claim 18:

Line 1, "15" has been changed to --16--.

Claim 19:

Line 1, "15" has been changed to --16--.

Claim 20:

Line 1, "15" has been changed to --16--.

Claim 23:

Line 1, "16" has been changed to --15--.

The Examiner's amendment has been made in order to comply with the 35USC 112, second paragraph and to place the application in a condition for allowance.

2. The following is an examiner's statement of reasons for allowance: the amendment filed 7/21/2006 and the telephonic interviewed on 8/22/2006 have overcome the prior art of record and the technical deficiencies. The prior art of record fails to teach or fairly suggest a combination of a reference current source to provide a substantially noise free differential current signal and a detector coupled to the differential current and to detect the noise in the power supplies as called for in claims 1, 5 and 16, the detector comprises PMOS current mirror, NMOS current mirror, first resistor, second resistor, a comparator, two resistor-capacitor high pass filters, a filter load as called for in claim 2, the reference current source comprises a voltage reference coupled to the substantially noise free ground, a voltage follower differential amplifier, PMOS-NMOS-NMOS diode stack, controllable NMOS current scalers as called for in claim 3, a substantially noise free differential current signal, wherein a first current signal of the substantially noise free differential signal is provided by a PMOS current mirror, and a second current signal of the substantially noise free differential current signal is provided by an NMOS current mirror as called for in claim 15. Therefore, claims 1-23 are presently allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan T. Lam whose telephone number is 571-272-1744. The examiner can normally be reached on Monday to Friday (7:30 am to 6:00pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, TIMOTHY P. CALLAHAN can be reached on 571-272-1740. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
